

JOSHUA GILLIAM

Spotsylvania, VA | Joshua.s.gilliam@icloud.com | (540) 308-5315 | [LinkedIn](#) | [Github](#) | responsepro.app

EDUCATION

George Mason University — Fairfax, VA

Incoming Freshman, expected graduation 2030

Riverbend High School — Spotsylvania, VA

Advanced Diploma, 3.6 GPA

CompTia Tech+ (formerly ITF+) — March 2026

EXPERIENCE

Founder & Solo Engineer — ResponsePro

May 2026 – Present | Remote

- Designed and built a multi-tenant SaaS platform delivering compliant, automated SMS lead-response for home service contractors, owning the full stack: backend, database, frontend, and regulatory compliance.
- Built the Node.js/Express and PostgreSQL (Supabase) backend, including Row Level Security (RLS) tenant isolation, Ed25519 webhook signature verification, an idempotent outbound SMS queue with exponential backoff, and PostgreSQL-backed rate limiting.
- Discovered and remediated a production security gap where the application's database role held the BYPASSRLS attribute, silently disabling all tenant-isolation policies; migrated to a properly scoped role and verified enforcement via a custom diagnostic endpoint.
- Designed a distributed reserve-and-release pattern across a Cloudflare Worker (edge intake) and central API to guarantee exactly-once lead processing under retry and partial failure, and applied the same idempotency/deduplication reasoning to a Telnyx Voice AI integration handling out-of-order and duplicate webhook delivery across a two-path failover system.
- Integrated Telnyx (SMS, Voice/Call Control, Verify API, and A2P 10DLC carrier brand/campaign registration), Stripe (subscription billing and webhook-driven client provisioning), and Dropbox Sign (e-signature contracts) into a single automated onboarding pipeline.
- Built the client-facing dashboard in React, TypeScript, and Vite with TanStack Query, and wrote and maintain the platform's Terms of Service, Privacy Policy, and client Service Agreement to ensure legal consistency with TCPA and 10DLC compliance requirements.
- Used AI-assisted development tools (Cursor) throughout the build while independently verifying correctness, security, and compliance implications of generated code, rather than accepting output uncritically.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Node.js, Express, React, HTML/CSS

Databases & Infrastructure: PostgreSQL, Row Level Security, Supabase, Cloudflare Pages/Workers, Render, Git/GitHub

APIs & Integrations: Telnyx (SMS/Voice/10DLC), Stripe, Dropbox Sign, Resend, JWT authentication, webhook signature verification

Tools: Cursor (AI-assisted development), VS Code, Vite, TanStack Query, Tailwind CSS

Compliance & Domain Knowledge: TCPA, A2P 10DLC carrier registration, PCI-adjacent payment handling, contract drafting
